

The historical index methodology for the corner records in Ada County has been where each corner certificate is identified by an alphabetical- numerical coordinate number which is derived from the system shown on the above township diagram.

For example, the quarter corner between sections 5 & 6 is identified as corner index C-5.

Corners such as meander corners, subdivision corners or street intersections which are not located at intersecting lines on the above diagram will be identified by reference to the nearest applicable coordinate lines.

For example: AB-1; M-1-2; VW-19-20.

Corners common to adjoining townships will be identified by coordinates of the townships in which the certificates are to be filed.

GCDB coordinate indexes that are shown on the corner record forms should be shown in accordance with the guidelines in the Bureau of Land Management Geographic Coordinate Database (GCDB) Publication Point Identification dated January 2006, a copy of which is available on the BLM website.
